

## POWER INPUT

Input must be 9 to 16 V  
Circuit protection  
- External: 10 A fuse required, 16 AWG wire  
- Internal: reverse polarity, overvoltage

## 3.3 V POWER SUPPLY

Supplies 150 mA, ultra low quiescent current (microamps)  
The whole system draws less than 5 mA while idle

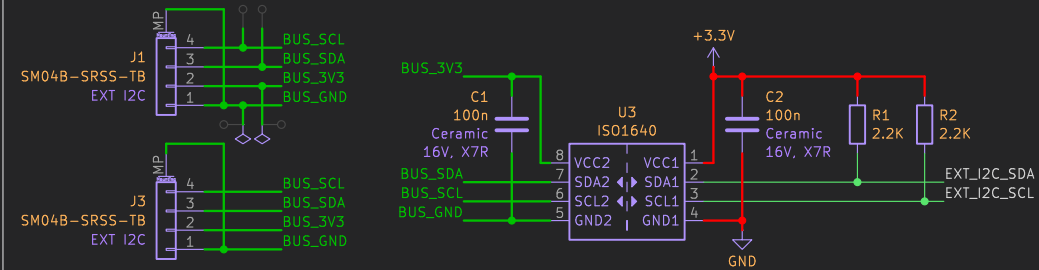

## 5 V POWER SUPPLY FOR HALL SENSORS

Supplies 150 mA, ultra low quiescent current (microamps)  
Disabled when not needed to drive peripherals

## EXTERNAL I2C INTERFACE (QWIIC)

ISO1640 provides bidirectional isolation, hot swap, and ESD protection  
- Side 1 drives the internal bus, intended for a low-capacitance node  
- Side 2 drives the external bus, can withstand stronger ESD and short circuit events

## LIFT ACTUATORS

The lift actuators are synchronized with rotary encoder feedback

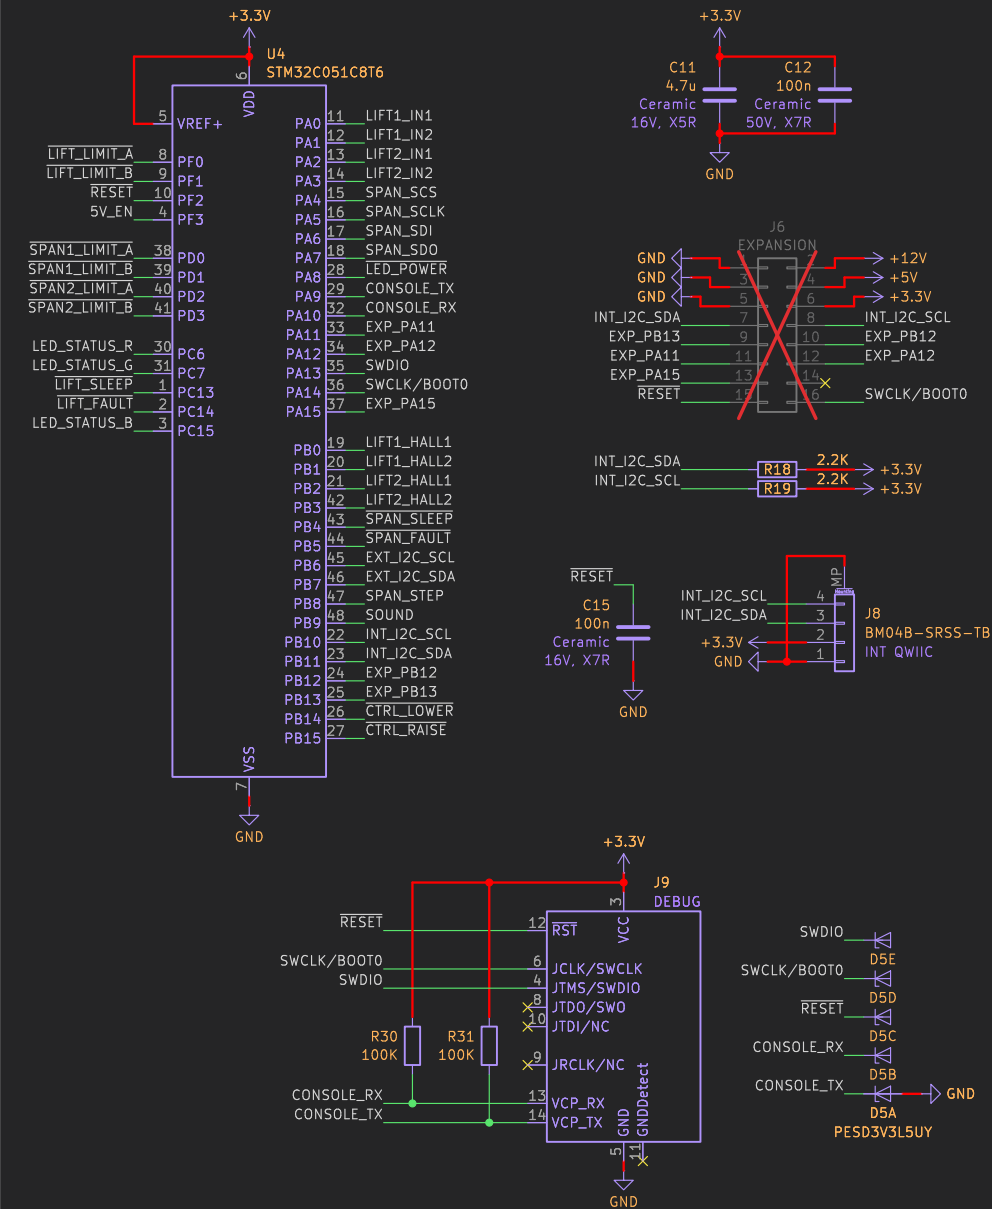

## SPAN ACTUATORS

The drivers form an SPI daisy-chain and are driven in tandem by the same step pulse

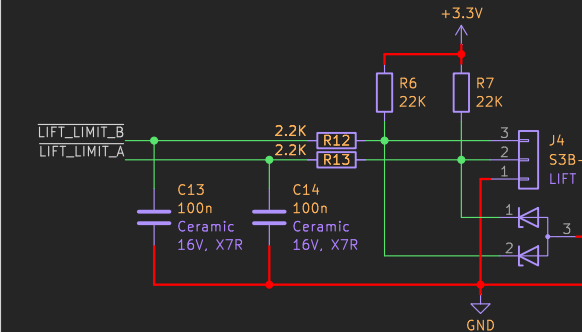

## STM32C051 MICROCONTROLLER

Programmed via SWD with STLINK-V3 and an STDC14 cable  
Can also access the system bootloader over I2C or UART by pulling BOOT0 high during RESET  
Unused pins are exposed via an expansion port including an internal I2C interface (QWIIC)

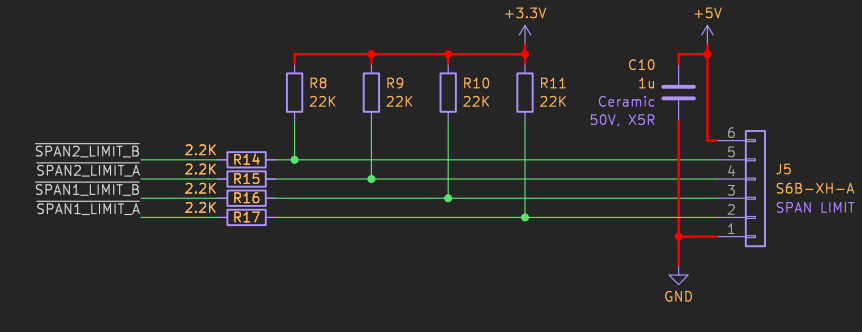

## LIFT LIMIT SWITCHES

Debounce switch contacts, ESD protection

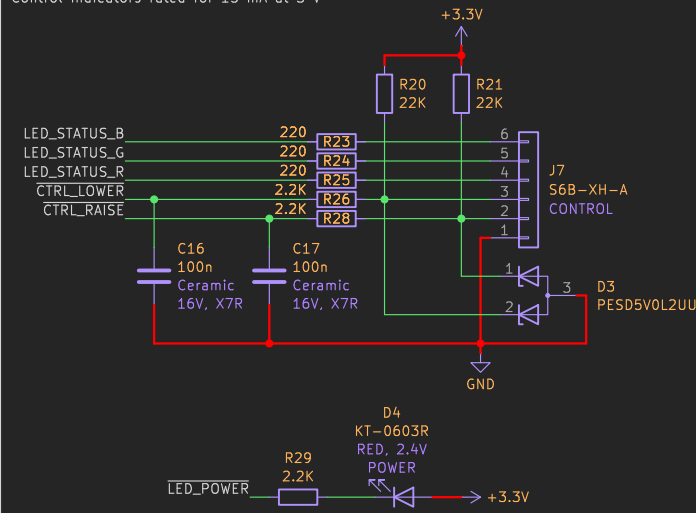

## SPAN LIMIT HALL SENSORS

## CONTROL INPUTS AND INDICATORS

Debounce switch contacts, ESD protection  
Control indicators rated for 15 mA at 3 V

## PIEZO BUZZER

Can be disabled in software or by cutting the solder jumper

Title: Bed Lift Controller

Size: A3

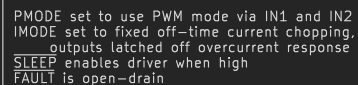

Date: 2026-01

Rev: v1.0

KiCad E.D.A. 9.0.6

Id: 1/7

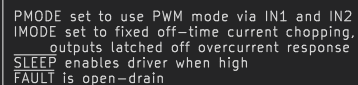

Designed for 12 V DC motor load up to 3 A (driver is rated for 6 A peak)

Set overcurrent protection trip current  
 $I_{trip} (A) = 450 \cdot V_{ref} (V) / R_{ipropi} (\Omega)$   
 Given  $V_{ref} = 3.3 \text{ V}$ ,  $R_{ipropi} = 470 \Omega$ ,  $I_{trip} = 3.16 \text{ A}$

Designed for 12 V DC motor load up to 3 A (driver is rated for 6 A peak)
